

Introduction of 4WD Car Chassis

Thank you for purchasing and using this 4WD Car Chassis kit from COKOINO.

Our aim is to provide you with a 4WD car chassis frame with cool appearance, strong expandability and diverse gameplay.

It uses large wheels with an outer diameter of 65mm and sky blue hubs. 4 TT Motors are used as its drive motors, so that you can use other types of wheels in addition to the wheels provided by this kit, such as Mecanum wheels, TT Motor makes this 4WD car chassis frame very compatible. The multifunctional acrylic car body plate can support the assembly of different types of control boards, such as Arduino UNO board and Raspberry Pi 4B, so you can choose the control board you favorite to assemble on this 4WD car, and the acrylic support plate also reserves a place for you to assemble the servo, you can assemble the servo and DIY the head of the car body, such as the ultrasonic module and bracket can be extended to the servo to make the car body more functional and interesting. The front and rear of the car body are equipped with a multi-functional extended acrylic. You can use the above slots and holes to DIY various sensor modules, making the experiment more rich and interesting.

1. 4WD Car Chassis

1.1 Assemble and install

Please refer to the documentation: 4WD Car Chassis Kit Tutorial\3 How to Assemble the 4WD Car Chassis

1.2 Structural composition

This 4WD Car Chassis is mainly composed of the following parts: TT Motor, acrylic Chassis frame, acrylic support plate , acrylic expansion plate, 18650 battery box

Part No.	Module
1,2,3,4	wheel
5	acrylic expansion plate
6	acrylic support plate
7	acrylic expansion plate
8	18650 battery box
9,10,11,12	TT Motor
13	acrylic chassis frame

Details of the modules listed above

[1,2,3,4]: Wheel. 4pcs wheel of the 4WD car - outer diameter 65mm, inner diameter 45mm, blue hub

[5]: Acrylic expansion plate - Acrylic expansion board at the front of the car body, you can expand some sensor modules and actuators through the holes above

[6]: Acrylic car body plate. The support platform for the control board, you can fix your control board with copper pillars and screws.

[7]: Acrylic expansion plate - Acrylic expansion board at the rear of the frame, which can fix the sensor module, 1602LCD screen, etc. through the holes above

[8]: 18650 battery box - You can mount two 18650 batteries on it to power the robot.

[9,10,11,12]: TT Motor. 4PCS TT Motor - controlled by the control board to drive 4 wheels

[13]: acrylic chassis frame - An important part of a 4WD car, it is the carrier board for all other modules

1.3 Selecting the control board

The multifunctional acrylic car body plate can support the assembly of different types of control boards, such as Arduino UNO board and Raspberry Pi 4B

1.3.1 Select the Arduino UNO R3 board and install it on the acrylic support plate of the car body, as follows

1.3.2 Select the Raspberry Pi 4B board and install it on the acrylic support plate of the car body, as follows

2. Notes

2.1 Please refer to the document [4WD Car Chassis Kit Tutorial\3 How to Assemble the 4WD Car Chassis](#). Pay attention to the specifications of the screws to prevent using them in the wrong place.

2.2 Before powering on, please make sure that all connected circuits are not short-circuited, especially 3.3V and GND

A short circuit can cause high current in your circuit, create excessive component heat and cause permanent damage to your hardware!

2.3 This kit is designed to provide a set of car bodies that can be defined by yourself and can be played in multiple ways. The development boards, sensor modules, brackets, etc. needed for DIY need to be prepared by you.

What's Next?

THANK YOU for reading this introduction of the 4WD car chassis !

If you find errors, omissions or you have suggestions and/or questions about this document, please feel free to contact us: cokoino@outlook.com

We will make every effort to make changes and correct errors as soon as feasibly possible and publish a revised version.

If you want to learn more about Arduino, Raspberry Pi, Smart Cars, Robotics and other interesting products in science and technology, please continue to visit our website. We will continue to launch fun, cost-effective, innovative and exciting products.
